Introduction

India is vulnerable to both natural and man made disasters. The last few decades have shown an increased frequency of disasters resulting in a large numbers of human casualties and huge economic losses. In the case of many such disasters, human and economic losses can be minimised to quite an extent even though they may not be totally preventable.

There has been paradigm shift in government focus from rescue, relief and recovery centric approach to a planning, prevention, mitigation and preparedness driven approach. It has been realised that disaster impacts can be reduced and mitigated through prevention and preparedness measures.

The basic role of the student is awareness of what to do before, during and after disasters. This would lessen panicking, paranoid and will also lessen the death toll. Knowing what to do after disaster, and at least basic first aid, will enable students help the authorities in saving lives.

If students are well aware then if there is a disaster they are able to protect themselves and they can also help others. Student branch is the most well informed branch of community. They can spread awareness about disaster management. Also they can form association to help in times of disaster. Children can help in managing Disasters in many ways few of them are:- Students can help in rehabilitation and resettlement of victims. They can spread awareness through rallies in streets. Provide the victims with basic needs. Preventing disasters at home - stopping building fires due to petty reasons like a short circuit.

To keep these issues in mind Disaster Management Institute, Bhopal has organised one day awareness programme on **Disaster Management** for School Students, Government of Madhya Pradesh.

A big aspect of disaster management is preparedness.
